Key Azure Solutions
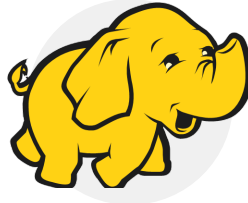

Learn more by enrolling in <u>AZ-900 Exam Prep: Microsoft Azure Fundamentals</u> on <u>Udemy.com</u>

Internet of Things

Although there are several services that help you create end-to-end solutions for IoT on Azure, the two main Azure IoT service types are Azure IoT Central and Azure IoT Hub
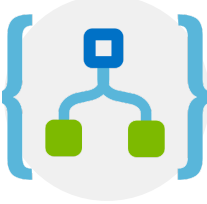

Big Data & Analytics

Key big data and analytics solutions in Azure include Azure SQL Data Warehouse, HDInsight, and Data Lake Analytics.

Artificial Intelligence

encompasses a wide range of services, including the Azure Machine Learning Service and the Azure Machine Learning Studio.

Serverless Computing

An environment hosted in the cloud that allows you to run code. Azure Functions, Azure Logic Apps, and Azure Event Grid are common serverless service types.

DevOps

A combination of two words - Development and Operations. Azure DevOps Services provides organizations with access to development collaboration tools.

Azure App Service

An Azure cloud offering that you can use to quickly and easily build web apps and mobile apps for any platform or device. Supports multiple languages and frameworks.
